

MIT Basket Hints:

I'll be referring to the pieces with the names below to make my hints more clear

1. Make sure you assemble the pieces into a 3x3x3 cube outside of the basket. Follow the constraint of keeping the letters M-I-T facing up on the top layer.
2. Before you start solving this puzzle, you need to get comfortable with how the M piece moves. With an empty basket, try putting in the M piece with the letters facing up. This is tricky, and requires an interesting rotation.
3. The first piece to get inserted into this puzzle is the T piece. It should rotate “around” the handle (similar to the first movement in the galaxy basket).
4. The second piece to get inserted is the M piece, using the same rotation idea as in hint 2. The difficulty here is working around the already inserted T piece.
5. The black I piece goes in third, and the red I piece goes in last. This requires a lot of movements and rotations of the M and T pieces.
