

Popcorn Basket Hints:

Make sure you read the Popcorn Basket Additional Information before looking at these hints

Solution 1 (easier):

1. Assemble a 3x3x3 cube outside of the basket, making sure none of the colored candies are visible on the top layer.
2. The most challenging part of this puzzle is figuring out what order the pieces go into the basket.
3. The first piece to go in, and the only piece requiring a rotation, is the piece with the text "Popcorn Basket" on it.
4. The "zig zag" piece with the arrow on it is the second to last piece to go in, and will require you to move around the previously inserted pieces to fit it in.

Solution 2 (harder):

1. The assembly of this solution outside of the basket is exactly the same as the easier solution.
2. The only difference between how the easy solution and hard solution look when solved inside the basket is a 90 degree rotation.
3. The first piece to get inserted is the piece with the text "By Kareem :)," and will require two rotations to insert.
4. The "zig zag" piece with the arrow on it is the third to last piece to go in, and will require you to move around the previously inserted pieces to fit it in
5. The second to last piece to go in is the piece with the 3-unit candy. Several pieces will have to move inside the box in order to accommodate this piece. This is by far the most challenging part of the puzzle.
